

This screenshot shows the dashboard with the 'Recommendations' section expanded. The top part of the dashboard still shows the 'Docker Compose Visualization' diagram. Below it, the 'Recommendations' section is titled and contains a list of five bullet points:

- **Redundancy:** Cluster and replicate services to eliminate SPOFs.
- **Scaling:** Use orchestration tools for horizontal scaling and load balancing.
- **Security:** Secure credentials and encrypt data.
- **Monitoring:** Set up comprehensive monitoring and logging.
- **Volumes:** Use external, backed-up storage solutions.

At the bottom of the recommendations section, a summary text states: 'These actions will enhance reliability, scalability, and security, ensuring a robust cloud application setup.'
